Summary

Software Engineer – Full Stack & AI Systems

Experience

AI Software Engineer

Mar 2026 - Present

Prodinit (Early Stage)

Remote

- Built the codebase-intelligence layer for an AI developer platform, combining tree-sitter-based multi-language indexing with a Neo4j context graph queried by AWS Bedrock-hosted subagents (Claude Haiku, Titan embeddings) to ground planning and code retrieval in real repository structure.
- Shipped a multi-agent product-image pipeline (quality analysis to AI-generated background replacement) live in production for an IndiaMART-scale client, deduplicating Gemini/GPT-Image calls by source URL and decoupling AWS S3 uploads via async ThreadPoolExecutor on AWS EC2.
- Architected a decoupled two-phase LLM assessment pipeline, separating high-latency synthetic data generation from real-time evaluation execution with an idempotent scope-hashing strategy to eliminate redundant compute.

Software Developer

Nov 2025 - Feb 2026

Postship / Instavid (Early Stage)

On-Site

- Built and scaled Go microservices with REST and gRPC APIs, PostgreSQL (GORM), and service-layer abstractions supporting concurrent order and media workflows.
- Developed an end-to-end AI video generation pipeline that converts product images into marketing videos, handling media ingestion, processing, and delivery via CDN-backed pipelines using AWS S3, Supabase, and CloudFront.
- Designed cloud media infrastructure using AWS (S3, CloudFront), Cloudflare CDN, and Cloudinary, enabling secure uploads, batch cache purging, and low-latency global delivery.

Front-End Developer

Feb 2025 - Aug 2025

Nature Crave (Individual Contributor)

Remote

- Delivered a high-performance Next.js e-commerce site with Tailwind CSS, consistently achieving 95+ Lighthouse scores.
- Integrated transactional email pipelines (Resend) to support customer communication and retention flows.

Projects

WhatRunsIndia | *Next.js, TypeScript, Django, PostgreSQL, Meta Graph API* | [\[Site\]](#)

Jul 2026 - Present

- Scoped against creative fatigue, cited by 62% of Indian D2C founders as their top growth constraint (DSG Consumer Partners x Meta, 2025).
- Designed a catalog-to-multichannel creative pipeline: product ingestion, AI generation, and write-back to Meta Commerce Catalogs via Batch API, extending to WhatsApp ad surfaces.
- Architected auth separating low-scope login from high-scope Meta Business grants to avoid App Review friction at signup, with phone-anchored, OTP-verified cross-provider account linking.
- Designed fault-tolerant Meta sync: transient-error retry classification, exponential backoff with jitter on rate limits, and pre-emptive throttling at 80% of Business Use Case quota.

AshbyHQ Job Scraper | *Node.js, Postgres, Next.js, GitHub Actions* | [\[Github Link\]](#) | [\[LIVE\]](#)

Jan 2026 - Present

- Architected an end-to-end job aggregation platform using a scraping pipeline for ranked job discovery.
- Modeled a normalized Postgres schema for companies and jobs with uniqueness constraints to ensure efficient querying.
- Designed a cron-driven ingestion pipeline (registry → fetch → normalize → diff → snapshot → notify) with idempotent PostgreSQL upserts and failure-isolated job processing.

OSS: Clipboard History | *React, Typescript, Plasmo* | [\[Github Link\]](#) Mar 2025 - May 2025

Education

PES University

Bengaluru, India

Bachelor of Technology - Electrical and Electronics

Nov 2021 - Aug 2025

Technical Skills

Languages: Go, Java, Rust, TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3/SCSS.

Frameworks and Libraries: React.js, Next.js, Vite, Tailwind, Framer Motion, GSAP, Django, Vue, Prisma, Redux, React Router, GORM, ConnectRPC/gRPC, OGL, Celery, Gemini API, tree-sitter.

Tools and Platforms: Git/GitHub, Docker, Oracle Cloud VM, AWS (S3, EC2, Bedrock, CloudFront, SES), GCP (Cloud Tasks, Storage, Logging), Vercel, Cloudflare, Cloudinary, PostgreSQL, Neo4j, Langfuse.
